

Data location ,
compliance.

M. Santhosh Kumar (192511017)
Sovereignty and legal

1.) Where is cloud data stored:

⇒ cloud data is stored in the data centers owned by cloud providers such as Amazon web services (AWS), microsoft Azure , and google cloud.

⇒ Data is saved on physical servers located in different countries or the region around the world.

⇒ cloud providers create multiple copies of data to improve availability backup, and disaster recovery.

⇒ Data is protected using encryption firewalls , and access control.

Ex:

A company in india can choose to store customer data in a AWS data center located in mumbai, instead of another country.

Data sovereignty:

- Data sovereignty means the data is governed by the laws of the country where it is stored.
- Every country has its own privacy and security regulation.
- Organization must ensure their cloud provider follows the legal requirements of that country.

Cross-Border Data transfer:

• Cross border data transfer is the movement of data from one country to another.

- Many businesses transfer data globally for cloud storage, analysis and backup.

Example:

If customer data collected in the India is stored in a server in Germany the transfer must follow both Indian and European privacy regulation.

Importance of Regulation:

- It protects the personal data and privacy of individuals.
- Ensure organisations collect only necessary data.
- Build customer trust and improve business reputation.
