

SIMATS ENGINEERING
 SAVEETHA INSTITUTE OF MEDICAL AND TECHNICAL SCIENCES
 CHENNAI-602105
 Department of Electrical and Electronics Engineering

Course Code:	EEA0109	Course Name:	BASIC ELECTRICAL AND ELECTRONICS ENGINEERING FOR NETWORK ANALYSIS
CO Assessed:	CO1	Assessment:	AT1-Simulation Task
Weightage:	15% of CIA	Total Marks:	20 (1 Question × 20 Marks)
CO5 Statement:	Apply the basic electrical laws in different DC and AC circuits and synthesize solutions by applying network theorems to simplify complex circuits using AC fundamentals, phasor analysis, power factor (BL4)		
Student Name:	M.Santhosh kumar	Reg. No.:	192511017

Question Type	Description	Questions	Total Marks
Simulation	Perform the simulation of the given system/model using appropriate software tools and analyze its behavior under different operating conditions. Record the results, compare the performance parameters, and submit the observations with proper interpretation.	Q1	20

Code of Conduct

I, M.Santhosh kumar _____ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: Santhosh

RUBRICS FOR MARKS CALCULATION

Question	Conceptual Understanding	Model Design	Tool Usage	Analysis of Results	Documentation	Total
Weightage	20%	25%	20%	20%	15%	100%
Q1						
Overall Total (100)						

Faculty In-charge	Course Coordinator

CO1 - Assessment Tool - 1

1) Cloud computing:

Cloud computing provide and delivery a service of storage storage, processing, and data storage over the internet, it So it is called as cloud computing.

Characteristic of cloud computation:

On board self service:

⇒ The devices and application were used by the user without any humans.

⇒ Example:

Online services.

boarded Network access:

⇒ Through the network all the application and services can be access by user easily.

Resource pooling:

It means that, the same resources can be used by multiple users, and also shared easily.

Rapid elasticity:

The online network access can be used by users and they need to pay the amount of the required access.

Conclusion:

cloud computing provide reliable and cost - efficient service.

a) Evolution of cloud computation:

⇒ How the cloud services are expanded in the today's world.

⇒ Storage:

The data can be securely stored
in data centre.

⇒ Networking:

In today's world they use
LAN and WAN type of network for
networking.

⇒ Network access:

With the use of Network we can access any
kind of application.

⇒ Data centre:

The data centre are
more wide and stores large
amount of data.

Conclusion :

The cloud computation provide users friendly and efficient service to the user.

3) Tools	description	Example
IaaS	provide more service, and the application	google EC2
PaaS	Provide development and the deployment	Email
XaaS	We can access any kind of resources related to IT field	microsoft Secure service.
SaaS	Make sure that the services are available	Secure service.

4) Data centre in cloud computation:

⇒ Data centre refers to the area where the data are stored securely.

⇒ The works lead by the data centre:

⇒ It store the data very safely and securely.

⇒ It uses firewall for the security.

⇒ It uses large frame work for the data centre.

⇒ It uses backend data for the application.

⇒ And also it uses virtualization.

⇒ It update the security system for better access.

Name: M. Senthosh Kumar

Reg no: 192511017

course name: computer architecture
cloud computing.

Q. Cloud computing:

Conclusion:

This are the works and process carried by the data center in the cloud computing.

5.2 Virtualization in the cloud computation:

⇒ Virtualization help to access the multiple device by the user with the help of virtualization.

⇒ The data can be accessed by the user easily.

⇒ And it does not make any data transfer issue.

⇒ This is the uses of virtualization in the cloud computing.
